Where Is My Doctor?

UI/UX Color System & Visual Design Specification

V1 Brand & Interface Guidelines • September 2026

This document defines the V1 color system and visual direction for the patient mobile app and administration web application. The goal is a calm, trustworthy, friendly and highly accessible healthcare-discovery experience rather than a clinical or hospital-management look.

1. Design Personality

- Simple
- Trustworthy
- Friendly
- Local
- Practical
- Accessible
- Calm

The interface should feel like a simple local discovery service: users should immediately understand where they are searching, what they searched for, where a doctor practices, when the doctor is scheduled and whether they should call to confirm.

2. Primary Brand Palette

Token	Color	Hex	Primary Use
Primary Teal	Teal	#0F766E	Primary buttons, links, active controls, brand
Deep Teal	Deep Teal	#115E59	Admin sidebar, strong brand emphasis
Soft Teal	Soft Teal	#CCFBF1	Selected states, subtle brand backgrounds
Success Green	Green	#16A34A	Available, verified, successful actions
Success Light	Light Green	#DCFCE7	Success badges/backgrounds
Warning Amber	Amber	#D97706	Schedule caution, needs confirmation
Warning Light	Light Amber	#FEF3C7	Warning badges/backgrounds
Error Red	Red	#DC2626	Errors, unavailable, destructive states
Error Light	Light Red	#FEE2E2	Error/destructive backgrounds
Info Blue	Blue	#2563EB	Informational states
Background	Slate White	#F8FAFC	Application/page background

Surface	White	#FFFFFF	Cards, sheets, modals, inputs
Text	Slate 900	#0F172A	Primary text
Secondary Text	Slate 600	#475569	Descriptions, metadata
Border	Slate 200	#E2E8F0	Borders, dividers, input outlines

3. Color Usage Rules

- Teal is the primary action and brand color; it should not fill the entire interface.
- Green communicates positive/confirmed states, not the main brand action.
- Amber communicates caution or uncertainty and should prompt users to verify.
- Red is reserved for errors, destructive actions and clearly unavailable states.
- Blue is informational and should not compete with the primary teal.
- Most of the screen should remain neutral: white surfaces on a very light slate background.
- Avoid gradients and excessive decorative color in V1.

4. Patient App Color Direction

The patient app should prioritize simplicity and recognition. The visual hierarchy should be driven by location, search and doctor availability.

Element	Color	Hex
Element	Color	Hex
App background	Background	#F8FAFC
Cards	Surface	#FFFFFF
Primary CTA	Primary Teal	#0F766E
Primary CTA pressed	Deep Teal	#115E59
Selected chip	Soft Teal	#CCFBF1
Primary text	Text	#0F172A
Secondary text	Secondary Text	#475569
Divider/border	Border	#E2E8F0

5. Patient Home Screen Direction

Recommended visual hierarchy:

- Location selector at the top with a small teal location icon.
- Large, high-contrast search field as the dominant control.
- Popular health/problem categories displayed as simple icon cards or chips.
- Primary actions use teal; category icons should remain visually restrained.
- Doctor cards use white surfaces with subtle borders.
- Availability uses semantic status colors.
- Call and Directions actions should be obvious without overwhelming the main doctor information.

6. Doctor Card Status Colors

Status	Color	Hex	Example

Available today	Success Green	#16A34A	🟢 Available today
Scheduled today	Warning Amber	#D97706	🟡 Scheduled today
Availability unknown	Slate	#64748B	⚪ Availability unknown
Not available today	Error Red	#DC2626	🔴 Not available today

7. Admin Web Color Direction

The admin web can be more information-dense than the patient app while retaining the same brand language.

- Sidebar: Deep Teal #115E59.
- Main workspace: #F8FAFC.
- Cards/tables: #FFFFFF.
- Primary actions: #0F766E.
- Active sidebar item: Soft Teal #CCFBF1 with Deep Teal text where appropriate.
- Status colors must match the patient app.
- Tables should use neutral borders and subtle row states rather than strong colored backgrounds.

8. Admin Dashboard

Recommended dashboard treatment:

- KPI cards use neutral surfaces with small semantic accents.
- Pending reports use amber accents.
- Resolved reports use green accents.
- Rejected reports use red accents.
- Verification/freshness information can use blue or amber depending on state.
- Charts should use a restrained palette and never rely on color alone to communicate meaning.

9. Typography

Typography must support both English and Bengali clearly.

- Primary candidate: Noto Sans Bengali.
- Latin fallback: Noto Sans.
- Alternative Bengali candidate for testing: Hind Siliguri.
- Recommended CSS fallback: 'Noto Sans Bengali', 'Noto Sans', sans-serif.
- Use medium/semibold weights for labels and actions; avoid excessive bold text.

10. Accessibility

- Never communicate a status through color alone; pair color with text and/or an icon.
- Maintain strong text/background contrast.
- Use sufficiently large touch targets on mobile.
- Avoid light gray text for important information.
- Use consistent semantic colors across app and web.

- Test Bengali text at actual mobile sizes rather than relying only on desktop previews.

11. Iconography

- Location: pin
- Search: magnifying glass
- Doctor: person/medical profile icon
- Specialty: category-specific simple icon
- Available: check/circle indicator
- Schedule: calendar/clock
- Call: phone
- Directions: navigation arrow
- Report: flag/alert
- Verification: check badge

12. Logo / Brand Mark Direction

- Avoid generic hospital imagery such as a large red medical cross or detailed hospital building.
- Primary concept: location pin + doctor/person.
- Alternative: location pin + minimal healthcare symbol.
- Primary logo color: #0F766E.
- Optional small accent: #16A34A.
- Keep the mark simple enough to remain recognizable as a mobile app icon.

13. What to Avoid

- Heavy blue hospital-style interfaces.
- Large areas of saturated green.
- Too many colors on a single screen.
- Medical imagery that makes the product feel like a hospital portal.
- Strong gradients in core UI.
- Using red for ordinary attention states.
- Using green to indicate doctor quality or superiority.
- Ranking doctors visually using colors that could be interpreted as medical quality scores.

14. Design Tokens

```
--brand-primary: #0F766E;
--brand-primary-dark: #115E59;
--brand-primary-light: #CCFBF1;

--success: #16A34A;
--success-light: #DCFCE7;

--warning: #D97706;
--warning-light: #FEF3C7;

--error: #DC2626;
--error-light: #FEE2E2;
```

```
--info: #2563EB;

--background: #F8FAFC;
--surface: #FFFFFF;
--text-primary: #0F172A;
--text-secondary: #475569;
--border: #E2E8F0;
```

15. Patient vs Admin Visual Treatment

Aspect	Patient App	Admin Web
Density	Low	Medium/high
Primary goal	Discover and act	Manage and verify
Background	#F8FAFC	#F8FAFC
Primary action	#0F766E	#0F766E
Navigation	Bottom navigation	Sidebar
Cards	Large, simple	Compact, information-rich
Tables	Minimal/rare	Primary management surface
Status	Highly visible	Compact badges + filters
Language	English + Bengali	English initially

16. Final Visual Direction

```
BRAND
Primary Teal        #0F766E
Deep Teal           #115E59
Soft Teal           #CCFBF1

SEMANTIC
Success             #16A34A
Warning             #D97706
Error               #DC2626
Info                #2563EB

NEUTRALS
Background          #F8FAFC
Surface             #FFFFFF
Text                #0F172A
Secondary Text      #475569
Border              #E2E8F0

PATIENT APP
Simple • friendly • high clarity • local • action oriented

ADMIN WEB
Structured • dense • operational • verification focused
```

17. Design Principle

The color system should help users answer four questions immediately: Where am I searching? What am I looking for? Where does the doctor practice? Can I rely on the displayed schedule? Color supports these answers but never replaces clear text.
